Highest Peak in Your Spring Garden Next Year

The Ideal DARWIN TULIPS

The demand for these Tulips by our customers has increased each year by leaps and bounds. Lovely, gay and sparkling colors added to the fact that they have a very long period of bloom, are responsible for their increasing popularity.

The Ideal Darwin Tulip is the result of the crossing of the common Darwin Tulips with a Wild Tulip or Tulip species made some years ago by Grullemans of Holland. The bulbs finally selected from the thousands of seedlings showed the invigorating effect of new blood, resulting in cleaner and clearer colors as well as larger, longer-lasting blooms.

Experts have been quick to see the many new qualities and virtues of the Ideal Darwin Tulips. In the pink shades, varieties such as The Peach are outstanding for their soft and lovely tints, as well as ruggedness of bloom.

We are indicating these New Hybrids by placing the word "New" immediately after the variety name. Only limited quantities are available so far. It's therefore best not to wait any longer than necessary to order them. We assure you they will be the most admired flowers in your garden.

BULB FERTILIZER

Fertilize your bulb plantings with bonemeal and dried cow or sheep manure. Use 5 lbs. of each per 100 sq. ft. Mix in the soil before planting. The bonemeal contains the phosphorus which promotes bigger and better blooms, and the manure contains the nitrogen for that luscious foliage.

DARWIN TULIPS

Darwins are usually the mainstay of a Tulip planting. Darwin Tulips are large and cupped, with very long, heavy stems that make them perfect for cutting. They bloom in May and last for several weeks.

Against a dark hedge Darwins make an unforgettable picture; use them, too, in clumps in the perennial or shrub border and in beds by themselves. Borders of pansies and forget-me-nots set them off to perfection.

Old English COTTAGE TULIPS

Cottage Tulips are varieties that have been found, for the most part, sequestered in the old cottage gardens of the British Isles. Hybrid Tulips are the result of crosses between the Cottage, Breeder and Darwin Tulips. They flower approximately at the same time as the Breeders and Darwins during the month of May, with the exception of the Far South, where they bloom in April. They are often marked by long, rather pointed petals and thin, wiry stems.

All the Tulips offered in our list are beautiful, presenting a great variety in form and coloring. They are prized for cutting because of their long stems and graceful habits, and are especially adaptable for permanent, bardy flower borders where they should be freely planted in large clumps and in masses.

BOTANICAL OR SPECIES TULIPS AND THEIR HYBRIDS ALL ARE TOP-SIZE BULBS

CLUSIANA (Botanical)

KAUFMANNIANA (Botanical)

Particularly valuable because they are permanent. Once planted, they need no further care. Tulip species, coming as they do from southern Europe and Asia, should be planted in dry, sunny locations.

The following collection of Tulip Species or Botanical Tulips includes a great number of beautiful and interesting varieties, which show a bewildering variation in size and shape of flowers, structure of the leaves, habits, etc. Cultivation has not modified them, and they may be planted in the rock gardens between creeping plants or in colonies in small, warm nooks where they will come up year after year without any care.

Clusiana. 6, 95c; 12, \$1.75; 25, \$3.25; 100, \$11.50
A charming species, known as the Lady Tulip. Small flower on 8-inch stem, white with crimson exterior and blue base. Very fine for cutting.

Dasystemon. 6, 90c; 12, \$1.65; 25, \$3.00; 100, \$11.00
A dwarf-growing species. White flowers with bright yellow eye. Usually produces 3 to 5 flowers on a stalk. 6 inches.

TRIUMPH TULIPS

Easily grown and tremendously long lasting. In the garden they will outlast any Tulip in existence. The bulbs multiply rapidly. May we suggest you plant a few this fall?

Inga Hume.

6, 90c; 12, \$1.65; 25, \$3.00; 100, \$11.00
Inside deep yellow slightly sprayed red; outside red with broad, sharply lined, yellow edge; large black base. 26 inches.

MULTI-FLOWERED TULIPS

(The Tree Tulip)

Instead of producing the conventional single stem with one bloom on top, the varieties offered under this heading all grow a strong main stem with from three to six branches half way up the stem, each branch carrying its own flower. All the blooms are of good size, are gracefully spaced and produce an unusual and great mass of color.

For cutting in particular, they are very decorative and useful, for they lend themselves nicely to arrangement. They are hardy and multiply quite freely in the garden.

FOSTERIANA, RED EMPEROR (Botanical)

For Spring Garden Beauty Plant

NARCISSUS are among the earliest spring-flowering bulbs and as such are most welcome. Their gay yellow and white, and cream and orange blooms seem to be the very essence of the new season. It is well to plant them where they will have shrubs or evergreens as a background. Smaller kinds are very effective in the rock garden, and for a superb spring picture there is nothing to surpass a large planting of naturalized Narcissus.

Daffodils Are Easily Grown—Require No Care

There is a saying that Daffodils never let you down. They grow easily and cause you no trouble. Sturdy, gay and colorful, they take the coldest weather in their stride. Anyone can plant them and achieve professional results, so persistent is their growth. They multiply with amazing rapidity, doubling in number each year. Another reason for their popularity is that they harmonize with all other flowers. Every garden, large or small, should have a generous supply of them. Only the finest are offered by Stebbins-Anderson.

NOTE—We have revised the grouping of Daffodils and Narcissus to conform to the Divisions as set forth in the classification directory of The Royal Horticultural Society of England 1950.

Beautiful soft yellow. An improved Primrose Phoenix.
- Mary Copeland.** 6, \$2.00; 12, \$3.75; 25, \$7.25; 100, \$28.00
This variety has been termed the most striking double in cultivation. The longer petals are pure cream-white with a golden ray down the center, interspersed with shorter petals of lemon and brilliant orange, giving a three-color effect. Unsurpassed for garden or show.
- Texas.** 6, \$1.75; 12, \$3.25; 25, \$6.50; 100, \$25.00

Division 5 TRIANDRUS NARCISSUS

Distinguishing characters: Characteristics of Narcissus triandrus clearly evident. The Triandrus are rather dwarf plants with slender, rush-like foliage and dainty, small trumpet flowers with reflexed petals. Daffodils

Division 5, Continued

Silver Chimes. 3, \$2.00; 6, \$3.85; 12, \$7.50; 25, \$14.75
One of the prettiest of the small-cupped Triandrus Hybrids, being a cross of Triandrus calathinus and Polyanthus Grand Monarque. Frequently produces heads of six or more flowers with pure white perianth and delicate pale primrose cup. An ideal and most beautiful plant to grow in pots in a cool greenhouse. Not perfectly hardy in the far north.

Thalia. 6, \$1.25; 12, \$2.25; 25, \$4.25; 100, \$15.00
In addition to a peculiar attraction at first sight, this flower leaves one with an impression that it is white; yet it is a whiteness that is not white. The recurving petals and the angle of the three trumpets are unlike the conventional short-cupped Daffodil. The stem is dark green, round and reed-like. Some call it the "Orchid-flowered" Narcissus, which adds to the mystery. Thalia provides unusually good material for artistic arrangements.

Division 6 CYCLAMINEUS NARCISSUS

Distinguishing characters: Characteristics of Narcissus cyclamineus clearly evident. Trumpets rich yellow, straight and tube-like; perianths reflex as in a cyclamen. Very early flowering and excellent for rock gardens.

Perianth golden yellow; trumpet tinged orange. Very early.

Division 7 JONQUILLA NARCISSUS

Distinguishing characters: Characteristics of any of the Narcissus Jonquilla group clearly evident. Jonquils have narrow, upstanding foliage and long stems. Most of them bear deliciously fragrant flowers, which are not only popular in the garden but are useful for forcing.

Golden Sceptre. 6, \$1.00; 12, \$1.85; 25, \$3.65; 100, \$13.00

Peonies

— the World's Finest Varieties . .

Peonies are long-lived plants that do not require transplanting unless they show signs of deterioration. For that reason it is worth while to be particular about the place where they are to be planted. Choose a sunny location that gets good drainage. Dig deep, and use some well-rotted cow manure or a commercial fertilizer to enrich the soil. Bonemeal is also recommended.

The best months for setting out Peonies are September and October. Be careful not to place them too deep, for deep planting may keep them from blooming. The eyes should be only 2 inches below the soil surface. A Bordeaux mixture spray will control diseases that occasionally attack Peonies.

The varieties offered here are the very finest in their class, and in the double-flowered group only the highest rated varieties are offered. The plants offered are strong, 3 to 5-eye, healthy plants and should give excellent results.

INSTRUCTIONS ON LAWN BUILDING AND MAINTENANCE

Early fall is one of the best times to make a new lawn, principally because of ample rainfall, continued cool weather and the killing of weed seed. Locally, however, early spring (March and April), because of sufficient rainfall and enough cool weather to give young grass a quick start, is considered equally good.

PREPARATION

For a successful lawn, at least 2 to 4 inches of good quality top-soil possessing the proper organic matter and plant foods for a sturdy growth of grasses is necessary. A good lawn fertilizer for this purpose is bonemeal, which is high in phosphate and should be used at the rate of 2 to 4 lbs. per 100 sq. ft. In addition, a 1-inch layer of well-rotted manure will supply sufficient organic matter. Spread and then spade the above mixture about 4 to 6 inches deep. After being completely broken up and thoroughly mixed, the ground should be raked and rolled. Now you have a good seed-bed prepared.

OLD LAWNS

Thin turf and bare spots on old lawns may be raked so that existing grass is not damaged, and then seeded as though making a new lawn. You may also broadcast seed on a late lawn in spring. The snow will carry the seed into the open ground.

ROLLING AND WEED CONTROL

After the frost is out of the ground it is extremely necessary to roll your lawn. Do this while it is still wet but not soggy; this helps to put the grass roots back where they belong.

Every spring we are asked, "How can we get rid of crabgrass, dandelions and most other lawn weeds?" Of course, one of the best ways is to have a good heavy turf, fertilized early, kept seeded so there will be no place for weeds to grow. However, when the above obnoxious weeds do appear, it is advisable to use chemicals such as 2,4-D. The presence of moss does not necessarily mean the soil is acid; usually it is the result of less fertility. Apply nitrate of soda (1 lb. per 100 sq. ft.) for this condition.

SOWING

Sow at the rate of 1 lb. to 200 sq. ft., broadcasting half the seed in one direction and the other half at right angles. Carefully rake, making sure not to "bunch" the seed. Roll only if the weather is dry; if you start watering, keep it up. Otherwise seed may sprout and die off before it has rooted. For a good lawn stand this is important. Do not cut before grass is 3 inches high, and set mower to leave a stand of 2 inches.

FERTILIZING

Whether you start the lawn in fall or spring, ample applications of fertilizers have many advantages. Fertilizer forces growth and helps crowd out crabgrasses and weeds. Because of better root strength, the grasses can more easily survive hot dry summer weather. Apply most fertilizers when the grass is dry, at the rate of 2 to 4 lbs. per 100 sq. ft. Established lawns should be fertilized at least once every two years.
